Sources, Transport, and Storage of Sediment at Selected Sites in the Chesapeake Bay Watershed

U.S. Department of the Interior

Sources, Transport, and Storage of Sediment at Selected Sites in the Chesapeake Bay Watershed U.S. Department of the Interior

The Chesapeake Bay Watershed covers 165,800 square kilometers and is supplied with water and sediment from five major physiographic provinces: Appalachian Plateau, Blue Ridge, Coastal Plain, Piedmont, and the Valley and Ridge. Suspended-sediment loads measured in the Chesapeake Bay Watershed showed that the Piedmont Physiographic Province has the highest rates of modern (20th Century) sediment yields, measured at U.S. Geological Survey streamflow-gaging stations, and the lowest rates of background or geologic rates of erosion (~10,000 years) measured with in situ beryllium- 10.
