**Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams) (IAHR Monographs)** Dieter Rickenmann

An important part of the risk management of natural hazards in mountain regions concerns the hazard assessment and the planning of protection measures in steep headwater catchments, i.e. torrent control and slope stabilization. Torrent processes in steep channels have their rightful place among the various alpine natural hazards and the corresponding control measures have a long tradition in the European alpine countries. In the planning and execution of such measures, professional experience has been of paramount importance. This experience was based primarily on observations made during and after hazardous events, as well as on regular field visits in the catchments of a steep headwater stream. Quantitative measurements, e.g. of the discharge and of the eroded and deposited solid materials, have been increasingly carried out only in the last decades. This set the basis to develop and improve quantitative methods to predict flow hydraulics, bedload transport and debris flows in torrent catchments.

This publication presents an overview of methods to quantify channel processes in steep catchments. The understanding and the quantitative description of channel processes provides an essential basis for the planning of protection measures.

### **From reader reviews:**

#### **Richard Twombly:**

The book *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams)* (IAHR Monographs) can give more knowledge and information about everything you want. So why must we leave the great thing like a book *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams)* (IAHR Monographs)? Several of you have a different opinion about e-book. But one aim this book can give many info for us. It is absolutely appropriate. Right now, try to closer using your book. Knowledge or info that you take for that, you may give for each other; it is possible to share all of these. Book *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams)* (IAHR Monographs) has simple shape however, you know: it has great and large function for you. You can appearance the enormous world by start and read a reserve. So it is very wonderful.

#### **Roxanne Jimenez:**

This *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams)* (IAHR Monographs) is great publication for you because the content and that is full of information for you who also always deal with world and still have to make decision every minute. That book reveal it details accurately using great manage word or we can claim no rambling sentences included. So if you are read that hurriedly you can have whole information in it. Doesn't mean it only gives you straight forward sentences but tricky core information with beautiful delivering sentences. Having *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams)* (IAHR Monographs) in your hand like keeping the world in your arm, info in it is not ridiculous one particular. We can say that no e-book that offer you world within ten or fifteen moment right but this guide already do that. So , it is good reading book. Heya Mr. and Mrs. hectic do you still doubt this?

#### **Russell Stringer:**

Many people spending their period by playing outside together with friends, fun activity with family or just watching TV the whole day. You can have new activity to pay your whole day by examining a book. Ugh, you think reading a book can really hard because you have to accept the book everywhere? It alright you can have the e-book, bringing everywhere you want in your Mobile phone. Like *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams)* (IAHR Monographs) which is finding the e-book version. So , why not try out this book? Let's observe.

#### **Ronald Tanaka:**

That publication can make you to feel relax. That book *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams)* (IAHR Monographs) was bright colored and of course has pictures on there. As we know that book *Methods for the Quantitative Assessment of Channel Processes in Torrents (Steep Streams)* (IAHR Monographs) has many kinds or genre. Start from kids until teenagers. For example

Naruto or Investigator Conan you can read and think that you are the character on there. So , not at all of book are make you bored, any it can make you feel happy, fun and relax. Try to choose the best book for yourself and try to like reading that will.
