Chemistry of Nanocrystalline Oxide Materials: Combustion Synthesis, Properties and Applications

K. C. Patil, M. S. Hegde, Tanu Rattan, S. T. Aruna

Chemistry of Nanocrystalline Oxide Materials: Combustion Synthesis, Properties and Applications K. C. Patil, M. S. Hegde, Tanu Rattan, S. T. Aruna

Nano-oxide materials lend themselves to applications in a wide variety of emerging technological fields such as microelectronics, catalysts, ceramics, coatings, and energy storage. However, developing new routes for making nano-based materials is a challenging area for solid-state materials chemists. This book does just that by describing a novel method for preparing them. The authors have developed a novel low-temperature, self-propagating synthetic route to nano-oxides by the solution combustion and combustible precursor processes. This method provides the desired composition, structure, and properties for many types of technologically useful nanocrystalline oxide materials like alumina, ceria, iron oxides, titania, yttria, and zirconia, among others.

The book is particularly instructive in bringing readers one step closer to the exploration of nanomaterials. Students of nanoscience can acquaint themselves with the actual production and evaluation of nanopowders by this route, while academic researchers and industrial scientists will find answers to a host of questions on nano-oxides. The book also provides an impetus for scientists in industrial research to evaluate and explore new ways to scale up the production of nanomaterials, offering helpful suggestions for further research.

Contents: Combustible Solid Precursors to Nanocrystalline Oxide Materials; Solution Combustion Synthesis of Oxide Materials; Alumina and Related Oxide Materials; Nano-Ceria and Metal-Ion-Substituted Ceria; Nanocrystalline Fe₂O₃ and Ferrites; Nano-Titania and Titanates; Zirconia and Related Oxide Materials; Perovskite Oxide Materials; Nanocrystalline Oxide Materials for Special Applications.

From reader reviews:

Hayden Roberts:

Information is provisions for those to get better life, information presently can get by anyone with everywhere. The information can be a expertise or any news even an issue. What people must be consider when those information which is in the former life are difficult to be find than now is taking seriously which one is appropriate to believe or which one often the resource are convinced. If you obtain the unstable resource then you obtain it as your main information we will see huge disadvantage for you. All those possibilities will not happen with you if you take Chemistry of Nanocrystalline Oxide Materials: Combustion Synthesis, Properties and Applications as your daily resource information.

Cedric Baker:

Your reading sixth sense will not betray a person, why because this Chemistry of Nanocrystalline Oxide Materials: Combustion Synthesis, Properties and Applications publication written by well-known writer whose to say well how to make book that could be understand by anyone who have read the book. Written with good manner for you, still dripping wet every ideas and writing skill only for eliminate your hunger then you still uncertainty Chemistry of Nanocrystalline Oxide Materials: Combustion Synthesis, Properties and Applications as good book not merely by the cover but also through the content. This is one e-book that can break don't evaluate book by its handle, so do you still needing an additional sixth sense to pick this specific!?! Oh come on your reading sixth sense already alerted you so why you have to listening to yet another sixth sense.

Daniel Padilla:

As we know that book is significant thing to add our knowledge for everything. By a reserve we can know everything we wish. A book is a list of written, printed, illustrated as well as blank sheet. Every year had been exactly added. This book Chemistry of Nanocrystalline Oxide Materials: Combustion Synthesis, Properties and Applications was filled concerning science. Spend your free time to add your knowledge about your scientific research competence. Some people has different feel when they reading the book. If you know how big good thing about a book, you can really feel enjoy to read a reserve. In the modern era like today, many ways to get book that you simply wanted.

Kathryn Kern:

As a student exactly feel bored to help reading. If their teacher asked them to go to the library or to make summary for some reserve, they are complained. Just little students that has reading's soul or real their passion. They just do what the trainer want, like asked to the library. They go to at this time there but nothing reading really. Any students feel that reading through is not important, boring and also can't see colorful photographs on there. Yeah, it is to get complicated. Book is very important for yourself. As we know that on this period, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country.

Therefore this Chemistry of Nanocrystalline Oxide Materials: Combustion Synthesis, Properties and Applications can make you sense more interested to read.
